

# Hen Zyme

## Each 100 g contains

Cellulase  
Amylase  
Arabinase  
Pectinase  
Phytase  
Protease  
Lipase  
Xylanase  
Alpha- Galacosidase  
Beta - Glucosidase

## Benefits (Helps) :

- For splitting antinutritional factors like phytates, galactosides, pectins, tannins, trypsin inhibitors etc., Which can not be digested by endogenous enzymes of poultry.
- For reducing the undesirable physiological effect of non starch polysaccharides, crude fibre, cellulose, arabinoxylans, mannans, galactans, xyloglucans etc. Thus reduce viscosity & loose droppings.
- For improving nutrient availability-carbohydrates, proteins, fats & minerals.
- For better productivity- weight gain, FCR, egg equality & production.

## Suggestive Usage :

**500 g / tone of feed in mash/  
crumbles/pelleted form**  
**1 kg / tone of feed before pelleting**

**Presentation : 1 Kg, 5 Kg, 25 Kg**
